

# Concern®

## Weed Prevention Plus 0% Phosphate

25 lb bag

### Effective Against

Dandelions  
Smooth Crabgrass  
Clover  
Quackgrass  
Barnyardgrass  
Curly Dock  
Green Foxtail

Giant Foxtail  
Creeping Bentgrass  
Shattercane  
Wooly Cupgrass  
Purslane  
Annual Bluegrass  
Lambsquarter

Black Nightshade  
Orchardgrass  
Black Medic  
Redroot Pigweed  
Velvetleaf  
Catchweed Bedstraw  
Buckhorn Plantain

(and many other common garden weeds.)

### Weed Control from the Natural Goodness of Corn

In 1986, an award-winning scientist at Iowa State University Research Foundation made an amazing discovery. He found that corn gluten meal, an animal feed by-product of the manufacture of corn starch, had the ability to inhibit the germination of grass and weed seeds in test plots.

### How Does It Work?

Through further research, he found that corn gluten meal contains naturally occurring substances, which inhibit the growth of the seeds' tiny feeder roots. This causes the weed seedlings to die before their roots ever have a chance to become established.

### So Effective It's Been Awarded Two Patents

This discovery is so unique and well documented that it received two patents from the United States Patent Office. Woodstream Corporation packages Concern® Weed Prevention Plus® under a special licensing agreement with Iowa State University Research Foundation.

### **Safe for Children and Pets**

Weed Prevention Plus® is composed of 100% natural ingredients. Children and pets can play on the lawn immediately after application. There's no waiting, warnings or worries.

### **Safe for Vegetables, Flowers and Lawns**

Since Weed Prevention Plus® kills only the roots of sprouting seeds, it can be used with confidence around any established plants, including transplants, flower beds, shrubs and roses. When your flower or vegetable sprouts have true leaves, it is safe to apply Weed Prevention Plus® even up to the day of harvest.

### **DIRECTIONS:**

**Notice:** Read the entire label. Use only according to label directions.

This product is designed for use on established turf grass and lawns as a natural pre-emergent herbicide and a slow release fertilizer. It is important that the product is used on established lawns and plants only and is applied early enough to control germinating weed seeds. The product is most effective when applied at a minimum of twice a year, in early spring and in the fall to control germinating annual weeds. The product performs best when an extended drying period follows the initial watering after application.

**DO NOT** use on grass that has been recently seeded as it may inhibit the germination of new seeds. This product may be applied anytime after the first mowing on a newly seeded lawn.

#### **Reseeding:**

**DO NOT** reseed treated areas for a minimum of 6 weeks after a single application of 10-20 lbs. per 1000 sq. ft.

#### **Spring Application:**

For crabgrass, dandelion and other spring germinating weeds, apply at the rate of 15 lbs. per 1000 sq. ft. This product should be applied one to two weeks prior to the anticipated germination of the annual weeds you wish to control. This timing will vary with the geographical area. A good general rule is to apply the product when crocuses are blooming or when forsythia blooms drop.

#### **Fall Application:**

Many weeds such as dandelions germinate in the fall. To control fall germinating weeds, apply 15 lbs. per 1000 sq. ft. in late summer, when temperatures turn cooler.

For optimum performance this product should be watered in following application in order to activate. An extended drying period following the initial watering makes this product most effective. If you use an automatic irrigation system, shut system down for several days to allow surface soil to dry.

**Flower Bed, Bulb, Rose, Garden and Shrub Application:**

To control annual weeds in and around flowers, roses, bulbs and shrubs apply 20 lbs. per 1000 sq. ft. by sprinkling evenly over the soil surface. Product works best if it is scratched in or worked into the top 2 inches of soil. Apply water to soil to activate the product.

<b>Broadcast Spreaders (Rotary)</b>	<b>Settings 15 lbs. 1000 sq. ft.</b>
True Temper	8
Republic EZ/Ortho	8 (2 passes)
Republic EZ/Grow	14 (2 passes)
